EDUCATION

Feb-2021 – Feb-2025

Bachelor's Degree, Computer Science in Hashemite University

EXPERIENCE

June – 2024, September - 2024

Web Development, Binary Digits

I trained at Binary Digits Company, where I learned Full Stack development with ASP.NET. My key responsibilities included developing web applications, managing databases, and collaborating with team members to deliver high-quality software solutions. On the front end, I used Blazer to create dynamic user interfaces, while on the back end, I leveraged .NET to build robust and efficient systems. I successfully completed multiple projects, including a real estate application and an HR management system, where I played a key role in improving system performance and ensuring seamless integration between the front and back ends. Additionally, my graduation project involved developing a website that offers a test for Tawjihi students to help determine their specialization in the College of Technology. The project also included a platform designed to assist university students and graduates in finding training and job opportunities. These experiences allowed me to gain expertise in full stack development and contribute effectively to project outcomes.

SKILLS

Time Management

Problem-solving

Communication
